

■ Source Code — `automatic_exhaust_fan.ino`

About the Code

This Arduino sketch runs on the ESP8266 NodeMCU. It reads the analog output of the MQ-2 gas sensor and compares it against a threshold of 500. Based on the reading, it controls the relay (exhaust fan), buzzer, and LED indicators.

Pin Assignments

Variable	Pin	Connected To	Direction
smokeSensorPin	A0	MQ-2 Analog Out	INPUT
hazard	D3	Red LED	OUTPUT
exhaust	D4	Relay IN	OUTPUT
buzzer	D5	Buzzer +	OUTPUT
safe	D6	Green LED	OUTPUT

Complete Source Code

```
//  
// Automatic Exhaust Fan – ESP8266 NodeMCU + MQ-2 Gas Sensor  
// Department of Electronics & Communication Engineering  
//  
  
const int smokeSensorPin = A0;    // MQ-2 analog output  
int sensrval, thresh;  
int hazard   = D3;    // Red LED – smoke detected  
int exhaust  = D4;    // Relay     – exhaust fan control  
int buzzer   = D5;    // Buzzer    – alarm  
int safe     = D6;    // Green LED – air is clean  
  
void setup() {  
  Serial.begin(9600);  
  pinMode(smokeSensorPin, INPUT);  
  pinMode(hazard, OUTPUT);  
  pinMode(safe, OUTPUT);  
  pinMode(exhaust, OUTPUT);  
  pinMode(buzzer, OUTPUT);  
  thresh = 500;      // Adjust threshold as needed  
}  
  
void loop() {  
  int smokeLevel = analogRead(smokeSensorPin);  
  Serial.print("Smoke Level: ");  
  Serial.println(smokeLevel);
```

```
if (smokeLevel > thresh) {  
    // ■■ HAZARD: Smoke detected ████████████████████████████████████████  
    digitalWrite(safe, LOW);  
    Serial.println("HAZARD INDICATION");  
    digitalWrite(hazard, HIGH); delay(500);  
    Serial.println("BUZZER ACTIVATION");  
    digitalWrite(buzzer, HIGH); delay(500);  
    Serial.println("EXHAUST FAN ON");  
    digitalWrite(exhaust, LOW); delay(500);  
  
} else {  
    // ■■ SAFE: No smoke ████████████████████████████████████████████████████████████  
    digitalWrite(safe, HIGH);  
    Serial.println("HAZARD DEACTIVATED");  
    digitalWrite(hazard, LOW);  
    Serial.println("BUZZER DEACTIVATED");  
    digitalWrite(buzzer, LOW);  
    Serial.println("EXHAUST FAN OFF");  
    digitalWrite(exhaust, HIGH);  
  
}  
delay(1000);  
}
```

How the Logic Works

Condition / Variable	Behavior
smokeLevel > thresh (>500)	Red LED ON Buzzer ON Fan ON Green LED OFF
smokeLevel < thresh (<500)	Green LED ON Buzzer OFF Fan OFF Red LED OFF
thresh = 500	Adjustable — increase for less sensitivity, decrease for more
delay(1000)	Sensor is read every 1 second
